

The Rooftop Garden Challenge

Grade 7 Week 1 Lesson ID: synthetic-week-1

Personalization Summary

The science-project theme supports the learner's interests while Week 1 checks reading detail and present-simple control.

Focus areas: main ideas, present simple questions

Previous feedback: Calibration week: no prior family feedback is available.

Answers and Explanations

R1

What is the main purpose of the class project?

Answer: B. To study how sunlight changes plant growth.

Why: The first paragraph states the question the class wants to study.

R2

What stays the same for all eight plants?

Answer: Every plant gets the same amount of water.

Why: Keeping water the same helps the class focus on sunlight.

R3

What can you infer from the dry leaves on two sunny plants?

Answer: The sunny area may give the plants too much heat.

Why: The plants are taller, but the dry leaves suggest that stronger sun also creates a problem.

R4

In paragraph 2, what does compare mean?

Answer: A. To examine similarities and differences.

Why: The team looks at both groups' notes to see how the plants differ.

G1

Choose the correct sentence.

Answer: B. Does Mina record the result?

Why: Mina is singular, so use does followed by the base verb record.

G2

Turn this sentence into a question: The students measure the plants every Friday.

Answer: Do the students measure the plants every Friday?

Why: Students is plural, so the question begins with do.

G3

Write a present-simple question asking where Mina records the results.

Answer: Where does Mina record the results?

Why: Mina is singular, so use does and the base verb record.

G4

Correct the error: Does the plants need more shade?

Answer: Do the plants need more shade?

Why: Plants is plural, so use do, not does.

H1

Write the meanings of measure, notice, compare, and result from memory; then check your work.

Answer: measure: find an amount; notice: become aware; compare: examine similarities and differences; result: what happens after an action or test

Why: Accept equivalent meanings that match the lesson vocabulary.

H2

Write two do questions and two does questions about a school project.

Answer: Answers vary. Example: Do the students record the results? Does Mina measure the plants?

Why: Each question should use do with a plural subject or does with a singular subject, followed by a base verb.

H3

In three sentences, explain the garden result and the class's next question.

Answer: The sunny plants grow taller, but some leaves become dry. The shade plants stay shorter and greener. The class next asks how to give enough light without too much heat.

Why: Accept a clear three-sentence summary containing the result and the next question.

Parent Guidance

Weekly focus: This calibration week checks reading evidence, inference, and do/does questions.

- Ask the learner to point to a sentence in the passage before checking R1-R3.
- If do/does is difficult, cover the answer and ask which subject comes after the question word.
- Record whether the reading felt too easy, suitable, or too hard for next week's adjustment.

Completion check: Confirm that all eight questions and the delayed homework are attempted; note recurring errors without supplying answers first.
